REQUEST FOR INFORMATION SYSTEM SERVICES

DATE OF REQUEST	SERVICE REQUESTED FOR DEPARTMENT(S)
1/11/02	Human Resources

SUBMITTED BY (key user contact)	EXECUTIVE SPONSOR (funding authority)
Name J. Briner	Name
Title Doctor in Computer Science	Title
Office Ashby Hall	Office
Phone 863-7529	Phone

TYPE OF SERVICE REQUESTED:

- | | |
|---|---|
| ☐ Information Strategy Planning | ☐ Existing Application Enhancement |
| ☐ Business Process Analysis and Redesign | ☐ Existing Application Maintenance (problem fix) |
| ☒ New Application Development | ☐ Not Sure |
| ☐ Other (please specify _____) | |

BRIEF STATEMENT OF PROBLEM, OPPORTUNITY, OR DIRECTIVE (attach additional documentation as necessary)

The current method of maintaining employee information, a request is sent to the human resources department where it must be updated manually. This is a time consuming and expensive process and is prone to error. The company also produces a physical phonebook monthly. As soon as the phone book is printed, it is out of date. The dynamic nature of the company contributes to the work required to keep the system updated. The costs associated with producing the phone book are further exacerbated since the system used to produce the phone book is separate from the main system for maintaining the employee data.

BRIEF STATEMENT OF EXPECTED SOLUTION

Employees will maintain their own personal information (address, phone number, beneficiary, etc.). The system should be able to provide an online phone book.

ACTION (ISS Office Use Only)

☐ Feasibility assessment approved

Assigned to T. Coker & J. Varnadore

☐ Feasibility assessment waived

Approved Budget \$

Start Date 1/11/02 Deadline 4/24/02

☐ Request delayed

Backlogged until date: _____

☐ Request rejected

Reason: _____

PROBLEM STATEMENT MATRIX

PROJECT:	Employee Self-Service System	PROJECT MANAGER:	J. Briner
CREATED BY:	T. Coker & J. Varnadore	LAST UPDATED BY:	T. Coker & J. Varnadore
DATE CREATED:	1/28/02	DATE LAST UPDATED:	4/22/02

Brief Statements of Problem, Opportunity, or Directive	Urgency	Visibility	Annual Benefits	Priority or Rank	Proposed Solution
1. Telephone book is soon out of date after printing	3 months	High	Will Allow Updated Info Immediately	2	New Development
2. Employee information maintained in microcomputer and mainframe.	3 months	Medium	Accessible by all employees	5	New development
3. Maintenance of mainframe expensive.	3 months	Low	Unidentifiable	3	New development
4. Employee information is often inconsistent across company systems.	3 months	High	Unidentifiable	1	New development
5. Redundant information in various systems.	6 months	Medium	Unidentifiable	6	Future version of newly developed system.
6. Payroll checks non-deliverable and mail sent to incorrect addresses.	3 months	Medium	Unidentifiable	1	New development
7. Employees unable to locate co-workers in an efficient manner	3 months	High	Unidentifiable	2	New development
8. Reports not delivered in an acceptable time frame.	3 months	Medium	Unidentifiable	4	New development

Project Feasibility Assessment Report

For

Employee Self Service System

By

Tim Coker & John Varnadore

PURPOSE

This *Project Feasibility Assessment Report* presents the preliminary findings of our investigation into the feasibility of your project to alleviate concerns about efficiencies of maintaining employee information. This report also outlines our proposal of the procedures and schedule to be followed during this project. If you find any discrepancies or misconceptions, please bring them to our immediate attention.

PRELIMINARY FINDINGS AND ANALYSIS

After a brief, preliminary investigation of the system being studied, we offer the following observations and initial analysis. The current system has become difficult and expensive to maintain. A completely new system appears to be the best course of action.

3Project Description

This section of the report describes the history that led to this project and the proposed project scope.

History Leading to this Project Proposal. The current system is a combination of a mainframe system and a microcomputer. Employees send requests to Human Resources to update their information via paper based forms. The HR employees must enter the data on the mainframe and microcomputer systems. This process is expensive and is prone to error. The mainframe is used for administrative type duties (payroll, etc.) while the microcomputer is used solely to produce a phone book. This phone book is almost out of date as soon as it is printed. Given the current level of growth experienced by the company, keeping data up to date has become overwhelming.

Scope of this Project. In the coming weeks, we will be carefully analyzing the project's scope to define a reasonable target and schedule. In the meantime, our preliminary definition is as follows: The main business area that will be affected by this system will be the Human Resources, though all employees will ultimately use the system. It will completely replace the existing mainframe and microcomputer systems and will effectively offload the work of maintaining the employees' information to the employees themselves. It will provide an interface where employees can easily change the address, phone number and other personal information that the company has on file from any location and/or workstation.

The project will address the following business functions:

1. Human Resources
Maintaining employee Information
2. All Employees
Maintaining their personal information

Project Environment

This section of the survey describes the project environment in terms of project participants, problems and opportunities to be addressed, and project constraints that will or may limit eventual solutions. **Figure 1** represents a context diagram of the current system.

Figure 1:

The employees enter submit a request to update their information via a paper employee. HR employees must then enter the data twice in the mainframe and microcomputer systems.

Project Participants. To date, we have identified the following list of participants for this project. Please inform us of any potential omissions.

1. Management - Direct Users or Managers of the System
2. Non-Management - Direct Users of the System
3. Other People or Departments Affected by, Interested in, or Interfacing to the System

Problems and Opportunities. We have compiled the following list of problems and opportunities to be addressed in the project. The list is not final. In the coming weeks, we will modify the list and provide you with a detailed analysis of problems, opportunities, and solutions. At any time during this project, you should feel free to add to, subtract from, or expand upon this preliminary list.

1. Data must be entered multiple times across multiple systems, creating errors.
2. The mainframe system is expensive to maintain.
3. The phone book is out of date as soon as its published.
4. Updates require an unacceptable amount of time.
5. Paychecks and company mailings are sent to the wrong addresses.

Project Constraints. Project constraints are limitations, good or bad, that will or may constrain any solutions that we might propose. Constraints can be technical, monetary, time, or political. To date, we have identified the following preliminary list:

1. The time frame is three months.
2. Training the employees to use the new system.

Our project approach will eventually examine numerous alternative system solutions, and it would be premature to commit to any solution at this time. However, it is never too early to begin brainstorming and cataloging ideas.

Client's perceptions of what they want or expect. It is our understanding that you envision a new or improved systems that allows employees to update their information themselves through a standard interface. It will also provide an electronic phone book accessible to all employees.

The analyst's perceptions of possible solutions and ideas. This system will be a web-based system with a combination of PHP or ASP and Oracle or mySQL-Server for the backend.

PROPOSAL

We propose to write a system that will allow users to update their personal information through the corporate intranet. This section of the report outlines my proposal.

Project Schedule Overview

See the attached Gantt chart for the project schedule.

ID	Task Name	Duration	Start	W	T	F	S	S	M	T	W	T	F	S
1	1 Preliminary Investigation	7 days	Fri 1/11/02											
2	1.1 List problems, opportunities, and directives	2 days	Fri 1/11/02											
3	1.2 Negotiate scope	1 day	Tue 1/15/02											
4	1.3 Plan the project	3 days	Wed 1/16/02											
5	1.4 Present the project and plan	1 day	Mon 1/21/02											
6	1.5 Project charter completed	0 days	Tue 1/22/02											
7	2 Problem Analysis	7 days	Wed 1/23/02											
8	2.1 Analyze the current system	3 days	Wed 1/23/02											
9	2.2 Establish system improvement objectives	2 days	Mon 1/28/02											
10	2.3 Update the project plan	1 day	Wed 1/30/02											
11	2.4 Present Findings and recommendations	1 day	Thu 1/31/02											
12	2.5 Problem Statement completed	0 days	Fri 2/1/02											
13	3 Requirements Analysis	8 days	Mon 2/4/02											
14	3.1 Identify business requirements	2 days	Mon 2/4/02											
15	3.2 Analysis system requirements	3 days	Wed 2/6/02											
16	3.3 Prioritize business requirements	2 days	Mon 2/11/02											
17	3.4 Update the project plan	1 day	Wed 2/13/02											
18	3.5 Requirements statement completed	0 days	Wed 2/13/02											
19	4 Decision Analysis	12 days	Thu 2/14/02											
20	4.1 Identify candidate solutions	3 days	Thu 2/14/02											
21	4.2 Analyze candidate solutions	3 days	Tue 2/19/02											
22	4.3 Recommend a target solution	3 days	Fri 2/22/02											
23	4.4 Recommend a project solution	3 days	Wed 2/27/02											
24	4.5 System recommendation completed	0 days	Mon 3/4/02											
25	5 Design	14 days	Tue 3/5/02											
26	5.1 Design the application architecture	4 days	Tue 3/5/02											
27	5.2 Design the system database	2 days	Mon 3/11/02											
28	5.3 Design the system interface	3 days	Wed 3/13/02											
29	5.4 Design the application logic	3 days	Mon 3/18/02											
30	5.5 Update the project plan	2 days	Thu 3/21/02											
31	6 Construction	10 days	Mon 3/25/02											
32	6.1 Build and test networks	2 days	Mon 3/25/02											
33	6.2 Build and test databases	3 days	Wed 3/27/02											
34	6.3 Install and test new software packages	2 days	Mon 4/1/02											
35	6.4 Write and test new programs	3 days	Wed 4/3/02											
36	7 Implementation	11 days	Mon 4/8/02											
37	7.1 Conduct system tests	2 days	Mon 4/8/02											
38	7.2 Prepare Conversion Plan	1 day	Wed 4/10/02											
39	7.3 Install Databases	2 days	Thu 4/11/02											
40	7.4 Train system users	4 days	Mon 4/15/02											
41	7.5 Convert to New system	2 days	Fri 4/19/02

PROBLEMS, OPPORTUNITIES, OBJECTIVES AND CONSTRAINTS MATRIX

Project:	Employee Self Service System	Project Manager:	J. Briner
Created by:	T. Coker & J. Varnadore	Last Updated by:	T. Coker & J. Varnadore
Date Created:	1/14/2002	Date Last Updated:	1/14/2002

CAUSE AND EFFECT ANALYSIS		SYSTEM IMPROVEMENT OBJECTIVES	
Problem or Opportunity	Causes and Effects	System Objective	System Constraint
1. Telephone book in hardcopy form, and it is difficult to update the information.	1. Personnel changes everyday with this growing company so there are changes in the information daily, so quarterly publication is not sufficient.	1. Eliminate the Telephone books from being in hard copy form. 2. Create a contact list that is online, so it would be easily accessible, to all users. 3. Cut down on the time that the administrator has to maintain the system, by allowing the users to update their own information. The administrators only have to add new employees with the ability to update when needed. 4. Allow users to input information update themselves in real-time. 5. Do away with the need for micro standalone application.	1. The system must be accessible from remote locations and desktops alike. 2. Must be securing so unauthorized data cannot be added to the system.
2. Micro and mainframe both used when possible to maybe just use one when employee information is being	1. Information about personnel is not stored in the same source repository.	1. Eliminate the micro system and therefore the duplication of information being keyed into the source. Providing	1. The system must be accessible from remote locations and desktops alike.

entered into the system.	2. There isn't an interface between the mainframe and micro applications.	one source of entry for personnel information.	2. Must be secured so unauthorized data cannot be added to the system.
4. Personnel data may be outdated or incorrect throughout the entire company systems.	1. Information has to be keyed in by an administrator, after they have been submitted by the users on forms. This cause a delay before information is actually stored in the system. 2. The Information entered is not in real-time, after the administrator keys in the data, they information doesn't actually get out to the users until the new quarterly hardcopy telephone book is published.	1. Have employees be able to enter and update their personal information themselves. 2. Have the old data that is already present be able to interface with the data that is going to be newly entered by the employees. Provide a single source of entry for the employee's information.	1. New information that is entered into the system must be of same specifications of the old system specifications.
5. Different databases have duplicate employee information.	1. Employee databases are application specific and not enterprise specific. 2. Don't have a single source to store employee information.	1. Make a single source repository to store the employee information.	
6. Because of the information not being updated probably, the company mailings are incorrect and payroll checks are not delivered. Employee not able to locate other employee's information quickly and sufficiently.	1. Information has to be keyed in by an administrator, after they have been submitted by the users on forms. This cause a delay before information is actually stored in the system. 2. There is not a place that employee information is located that other employees can access their information.	1. Have real-time changes to information inputted by the employees. 2. Provide a single source of entry for the employee's information. 3. Have online employee listing accessible to all employees.	1. System must be platform independent and accessible from desktops. 2. Must be secured so unauthorized data cannot be added to the system.
7. Users are unable to access reports in a sufficient time period.	1. The IS personnel cannot keep up with the request of the employees in a time efficient manner, because of backup of request and other job priorities they are responsible for. 2. Current technology doesn't support the ad-hoc report and inquiry functionality.	1. Provide an ad-hoc reporting and inquiry feature for the users.	1. Must be secured so unauthorized access to the employee data on the system.

Study Report

I. Executive summary

A. Summary of recommendation

We suggest that the system be moved to a relational database with a Web interface.

B. Summary of problems, opportunities, and directives

The system is currently expensive to maintain and the data is often not current with other systems. Reports are not available in a timely fashion.

II. Overview of the current system

A. Strategic implications

Other systems using employee information will need to be modified to access the data in the new system.

B. Models of current system

1. Interface model

The users send a request to the HR dept who then implements the changes among two separate systems. A phone book is printed quarterly.

2. Data model

Data is stored in the mainframe system and the microcomputer system.

3. Geographic models

The company is spread out over the country and requests must be directed to the data center in Florida for entry by the HR department.

4. Process model

Users fill out change request forms and they are sent to Human Resources where the requested changes are made.

III. Analysis of the current system

A. Performance problems, opportunities, and cause-effect analysis

The requests require a long time to take effect since there are so many stops in the chain. Reports are also unavailable in a timely manner.

B. Information problems, opportunities and cause-effect analysis

The information is maintained in two different systems causing inconsistencies. Consolidating the data in a flexible source will greatly improve the availability of the information.

C. Economic problems, opportunities, and cause-effect analysis

The mainframe is expensive to maintain. Implementing a system by which employees can maintain their own information will enable savings in labor.

D. Efficiency problems, opportunities, and cause-effect analysis

Many hands must touch the data resulting in potential errors and prolonging the time required for an update.

IV. Detailed recommendations

A. System improvement objectives and priorities

The system will enable employees to update their own information and provide an online phone book.

B. Constraints

We are limited to a time frame of 6 months and will have to train the employees to use the new system.

Entity/Definition Matrix

ENTITY	BUSINESS DEFINITION
Employee	A person who is currently on the company's payroll or on company benefits.
Emergency Contact	Person to contact in case of an emergency at work concerning the employee in which the contact is associated with. Employee can list a primary and secondary emergency contact individual.
Job Description	Gives a description of the type of job the employee holds.
Activity Code	Gives information about the current status of the employee with the company.
Room	A location in the building where one or more employee works.
Company Mail Stop	Location within the building where employees mail is received and distributed, either inter-company mail or external mail.
Department	A specialized unit of employees that work to accomplish the same goal.

Key-Based Data Model

Fully Attributed Data Model

PRIMITIVE DIAGRAM

Characteristics	Candidate 1	Candidate 2	Candidate 3
Portion of System Computerized Brief description of that portion of the system that would be computerized in this candidate.	COTS package PeopleSoft would be purchased and customized to satisfy ESSS required functionality.	Employee Information (profile only), United Way and Savings Bonds deductions.	Employee Information (profile only).
Benefits Brief description of the business benefits that would be realized for this candidate.	This solution can be put into place quickly because it's a purchased solution. (Some business processes might need to be changed to support software processes.)	Completely supports user required business processes for A1-Information Systems.	Same as Candidate 2.
Servers and Workstations A description of the servers and workstations needed to support this candidate.	Refer to corporate information architecture for A1-Information System.	Same as Candidate 1.	A single UNIX box running Apache and MySQL
Software Tools Needed Software tools needed to design and build the candidate (e.g., database management system, emulators, operating systems, languages, etc.). Not generally applicable if applications software packages are to be purchased.	MS Visual C++ 6.0 and JAVA to customize COTS package. MS Internet Explorer 5.0 Oracle 8.0	Cold Fusion MS Visual C++ 6.0 System Architect MS Internet Explorer 5.0 Oracle 8.0	PHP Visio MS Internet Explorer Apache TextEditor MySQL
Application Software A description of the software to be purchased, built, accessed, or some combination of these techniques.	Package Human Resource system solution from PeopleSoft Software.	Custom in-house solution.	Same as Candidate 2.
Method of Data Processing Generally some combination of: on-line, batch, deferred batch, remote batch, and real-time.	Client/Server with Intranet Interface.	Same as Candidate 1.	Same as Candidate 1.
Output Devices and Implications A description of output devices that would be used, special output requirements (e.g. network, preprinted forms, etc.), and output considerations (e.g., timing constraints).	HP 8000c Laser Printers connected to the LAN.	Same as Candidate 1.	Same as Candidate 1.
Input Devices and Implications A description of input methods to be used, input devices (e.g., keyboard, mouse, etc.), special input requirements (e.g. new or revised forms from which data would be input), and input considerations (e.g., timing of actual inputs).	Keyboard and Mouse.	Same as Candidate 1.	Same as Candidate 1.
Storage Devices and Implications Brief description of what data would be stored, what data would be accessed from existing stores, what storage media would be used, how much storage capacity would be needed, and how data would be organized.	Oracle 8.0 Database Management System with 25Gb storage capacity. (One for each site.)	Same as Candidate 1.	Unix server with a large disk.
