

Service Agreement Database

Joshua Joseph

**Purpose:**

This database is used to electronically keep track of estimates given by Joseph and Sons Termite and Pest Control and customers who the estimates are given to.

Background:

Joseph and Sons gives estimates to customers for under house wood repairs, treatment for wood destroying insects, and general pest control. The estimates are a contract for the company to do the work on the estimates.

Currently the company keeps track of all the estimates on paper. Occasionally the estimates get lost or misplaced. This database will store the estimates to minimize the chance of misplacing the estimates.

Date of Request: July 2005
Requested by: Joseph and Sons
Owner of Company: Michael Joseph
Service Requested: New Application Development

Brief Statement of Problem:

Joseph and Sons currently keeps track of all estimates given on hard copy. Occasionally estimates are lost or misplaced. When the estimate gets lost if there isn't a copy somewhere then the estimate must be rewritten. Some information may get lost if the estimate must be rewritten.

Brief Statement of Expected Solution:

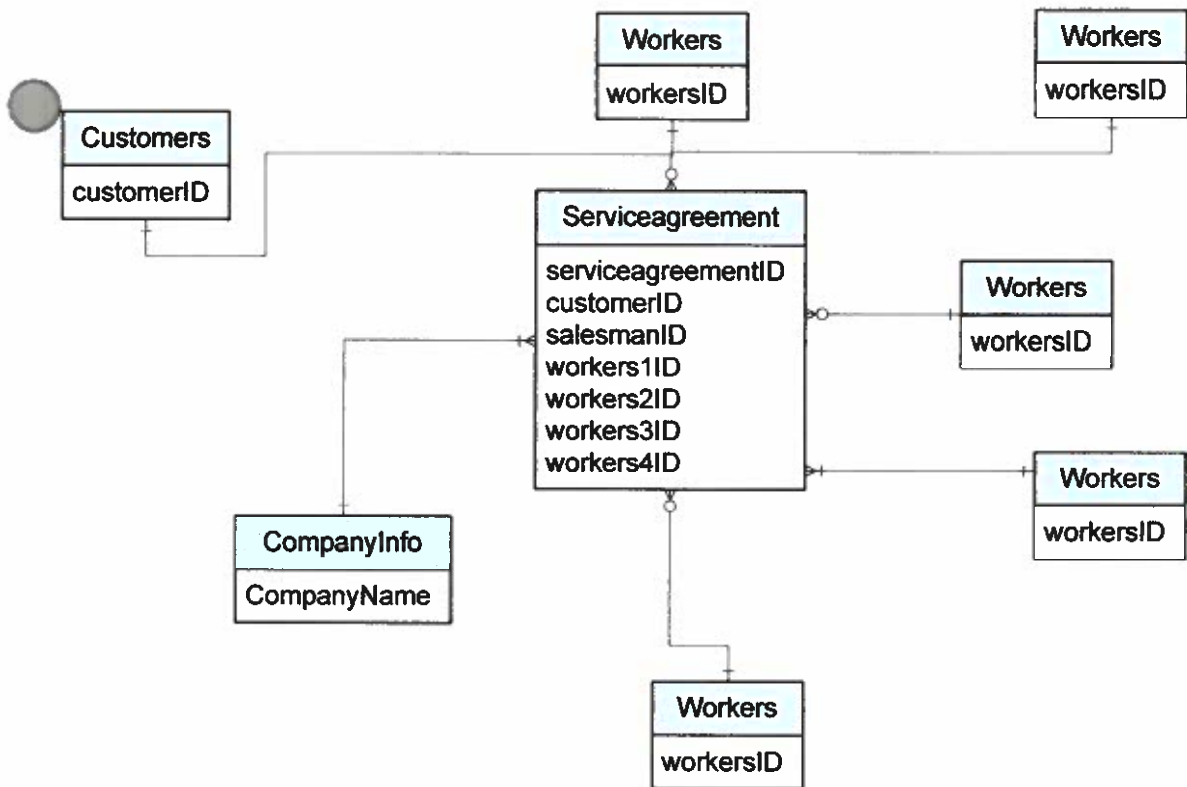

The new database will allow the estimates to be stored electronically. This will allow the user to access the databases whenever they may need to. If a hard copy of the estimate gets lost they will still be able to get another copy.
