VMS Testing Results

I. Home

A. Search

1. (Improvement) There isn't a *Date Created* column in search results,
2. (Correct) The sort using *Company Name* did work.
3. (Improvement) The users would like to be able to search by business size and/or type of business. Also, they want to be able to search by NAICS codes in the future.
4. (Bug) When searching a vendor, the field "created" should only return saved vendors that are created by that specific person (not modified by).

II. Vendor

(Improvement) The vendor name needs to always be visible, on the top of the page outside of the tabs

(Improvement) The colors and spacing of tabs in the secondary tabs need to be improved so that they aren't confusing. It should be visually obvious that the Summary, Details, and CostPoint tabs are a subset of the Vendor tab.

(Improvement) They would like to have the fields in a central location on the screen to avoid having to scroll.

(Improvement) The workflow needs to make sense; they felt that this could be improved.

(Correct) The users really liked having a central application as opposed to having to go to many different places to fill out various forms.

A. Summary

1. (Bug) Does not display company name after saving
2. (Bug) The Summary tab is displaying the wrong vendor information; it appears to display the most recently added vendor as opposed to the one that was selected.

B. Details

1. Request Information

- a) (Improvement) The Vendor Status needs to include dropdown value "Give Warning"
- b) (Improvement) The Company Name field should be moved to the top fragment, which is currently the Request Information fragment.

2. Vendor Information

- a) (Improvement) Field "Employee Id Number" requires 9 digits and an error message should be shown if 9 digits are not entered
- b) (Improvement) Need to add "Trust/Estate" to Tax Classification dropdown
- c) (Correct) They really like the Tax Classification dropdown and the other dropdowns.

3. Addresses

- a) (Improvement) Need to be able to pull up Zip-Plus-4 in Zip Code field
- b) (Improvement) Would like "Country" field to automatically fill-in as you type name
- c) (Improvement) Need to add "Payment Address" field and "Order Address" field
- d) (Improvement) Need a way to specify which address will be a default address for a vendor. This is currently being done in CostPoint but would ideally be done in VMS.
- e) (Improvement) Address Type needs to be editable so that the payer knows which address to send it to.

(1) The payer only sees the Address Type, not the actual address information. For example, there might be multiple EFT-type addresses so one might be renamed to EFT-PO2009 as opposed to just having EFT for the type.

4. Small Business Classification

- a) (Improvement) The Small Business Classifications are hard to read, as far as matching up the label with the checkbox. They suggested alternating the colors of each line.

b) (Improvement) The Business Size field should be moved to the bottom of the fragment it's currently in so that the natural flow of data is maintained, since the following fragment is the Small Business Classifications.

5. Contacts

a) (Correct) The users like the Contacts section and being able to add multiple contacts.

6. Accounting Review

a) (Improvement) Need to add "Vendor Id" field

III. Notes

A. (Correct) – Passed Test Case

IV. Attachments

A. (Improvement) Four most used dropdown values: (VMS and SB Form missing currently)

1. EFT
2. W9
3. W8
4. Small Business Form

V. Changes

A. (Correct) The users said that the Changes tab is very useful to them.

VI. Buttons

A. Save

1. (Improvement) When an edit is made in the form and needs to be saved, the Save button becomes outlined in red but once the button has been clicked this outline does not go away like in Invoice Processing. The users like consistency throughout our programs.
2. (Bug) They want to be able to enter in all the information at once and then click Save. There was an issue with this resulting in an "Error 99" message when they tried to save after filling in multiple fields.

3. (Bug) There was an issue where the vendor had been successfully saved but when they tried to leave the page, an alert would pop up saying that there was unsaved information on the page.

B. Send a Link

1. (Bug) Send a Link needs to be functional
2. (Improvement) Does not need two send buttons
3. (Bug) The top send button does not work
4. (Improvement) The links should be sent to the AFG Vendor inbox.
5. When a link has been received, what does replying to that email do?
6. (Improvement) The user look-up in the Send a Link pop-up didn't automatically guess the user as they were typing in the name; they still had to scroll to the correct name.
